

Blog Management API

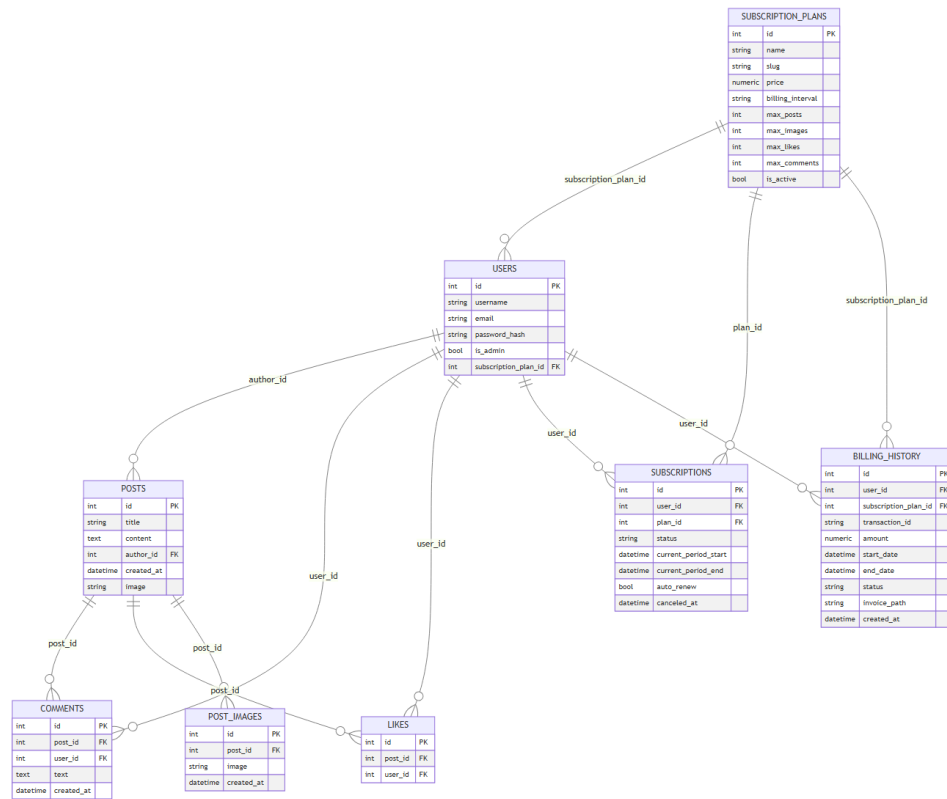

Subscription & Billing System — Evidence Report

Live, end-to-end proof of the subscription-based access-control feature: database relationships, plan and billing data, generated invoices, API verification, and plan-limit validation messages — captured directly from the running application and its real Postgres database.

Generated: 2026-09-18

1. Database Model & Relationships

Blog Management API — Database Model Relationships (live Postgres schema)

Live schema for all 8 tables and every foreign key, generated directly from the running Postgres database (not hand-drawn).

POST /posts/{post_id}/comments blocked at the comment limit.

6. Test Suite Results

Full automated test suite (pytest), run against the codebase in its current state:

Category	Test files	Tests
Core blog management (auth, posts, comments, likes, images, pagination, DB)		193
Subscription plans & models	3	31
Subscription service & API	4	65
Plan limit enforcement (post/image/like/comment + validation message)	5	41
Billing & invoices	4	76
Subscription access-control security review	1	17
Total	20	423

Result: 423 passed, 0 failed. No regressions in existing blog functionality.
